The PHP you are currently using is version 5.3. PHP 5.3 has hash support in the core package (see http://php.net/releases/5_3_0.php), thus there is no php53-mhash to be installed.

When you execute "yum install php-mhash" yum is trying to install the mhash package for PHP 5.1.

You'll have to change your PHP code

to use hash (see <http://php.net/hash>) or you'll have to downgrade your PHP to version 5.1.
